Sistema Socio Sanitario
Regione Lombardia
ASST Spedali Civili

N.D., 72 aa

- 21/2/2023: negli ultimi mesi riferita **astenia**; episodi **febbrili ricorrenti**

Anamnesi patologica remota:

Pregresso infarto del miocardio
Diabete mellito in terapia con Metformina
Tumore alla prostata 3 anni fa (chirurgia + chemio)

Anamnesi famigliare:

Non significativa

EO:

Pz lucido, collaborante, eupnoico.

Petecchie Arti inferiori

Non epato/splenomegalia

Non linfoadenopatie superficiali

Emocromo

Esame	*Risultato*	*Valori riferimento*
Globuli bianchi	1.800	4.000-10.000/mmc
Neutrofili	*700*	*2000-7000/mmc*
Linfociti	*650*	*1100-4000/mmc*
Monociti	*400*	*250-800/mmc*
Eosinofili	*50*	*0-50/mmc*
Basofili	*0*	*0-50/mmc*
Globuli rossi	3.900.000	3.800.000-4.800.000/mmc
Emoglobina	8.5	12-16 g/dL
MCV	104	82-99 fL
MCH	31	27-31 pg
RDW	13%	12-17%
Piastrine	**27.000**	150-400.000/mmc

Esame	*Risultato*	*Valori riferimento*
Globuli bianchi	2.700	4.000-10.000/mmc
Globuli rossi	3.900.000	3.800.000-4.800.000/mmc
Emoglobina	8.5	12-16 g/dL
MCV	104	82-99 fL

Che tipo di anemia?

1) ACUTA

2) CRONICA

1) Lieve

2) Moderata

3) Severa

1) Microcitica

2) Normocitica

3) Macrocitica

Chiedereste altri esami per inquadrare il tipo di anemia?

Reticolociti: 50.000 mU/ml ⬇

Eritropoietina: 200 mU/ml ⬆

Esame	*Risultato*	*Valori riferimento*
Globuli bianchi	1.800	4.000-10.000/mmc
Neutrofili	*700*	*2000-7000/mmc*
Globuli rossi	3.900.000	3.800.000-4.800.000/mmc
Emoglobina	8.5	12-16 g/dL
MCV	104	82-99 fL
MCH	31	27-31 pg
RDW	13%	12-17%
Piastrine	**27.000**	150-400.000/mmc

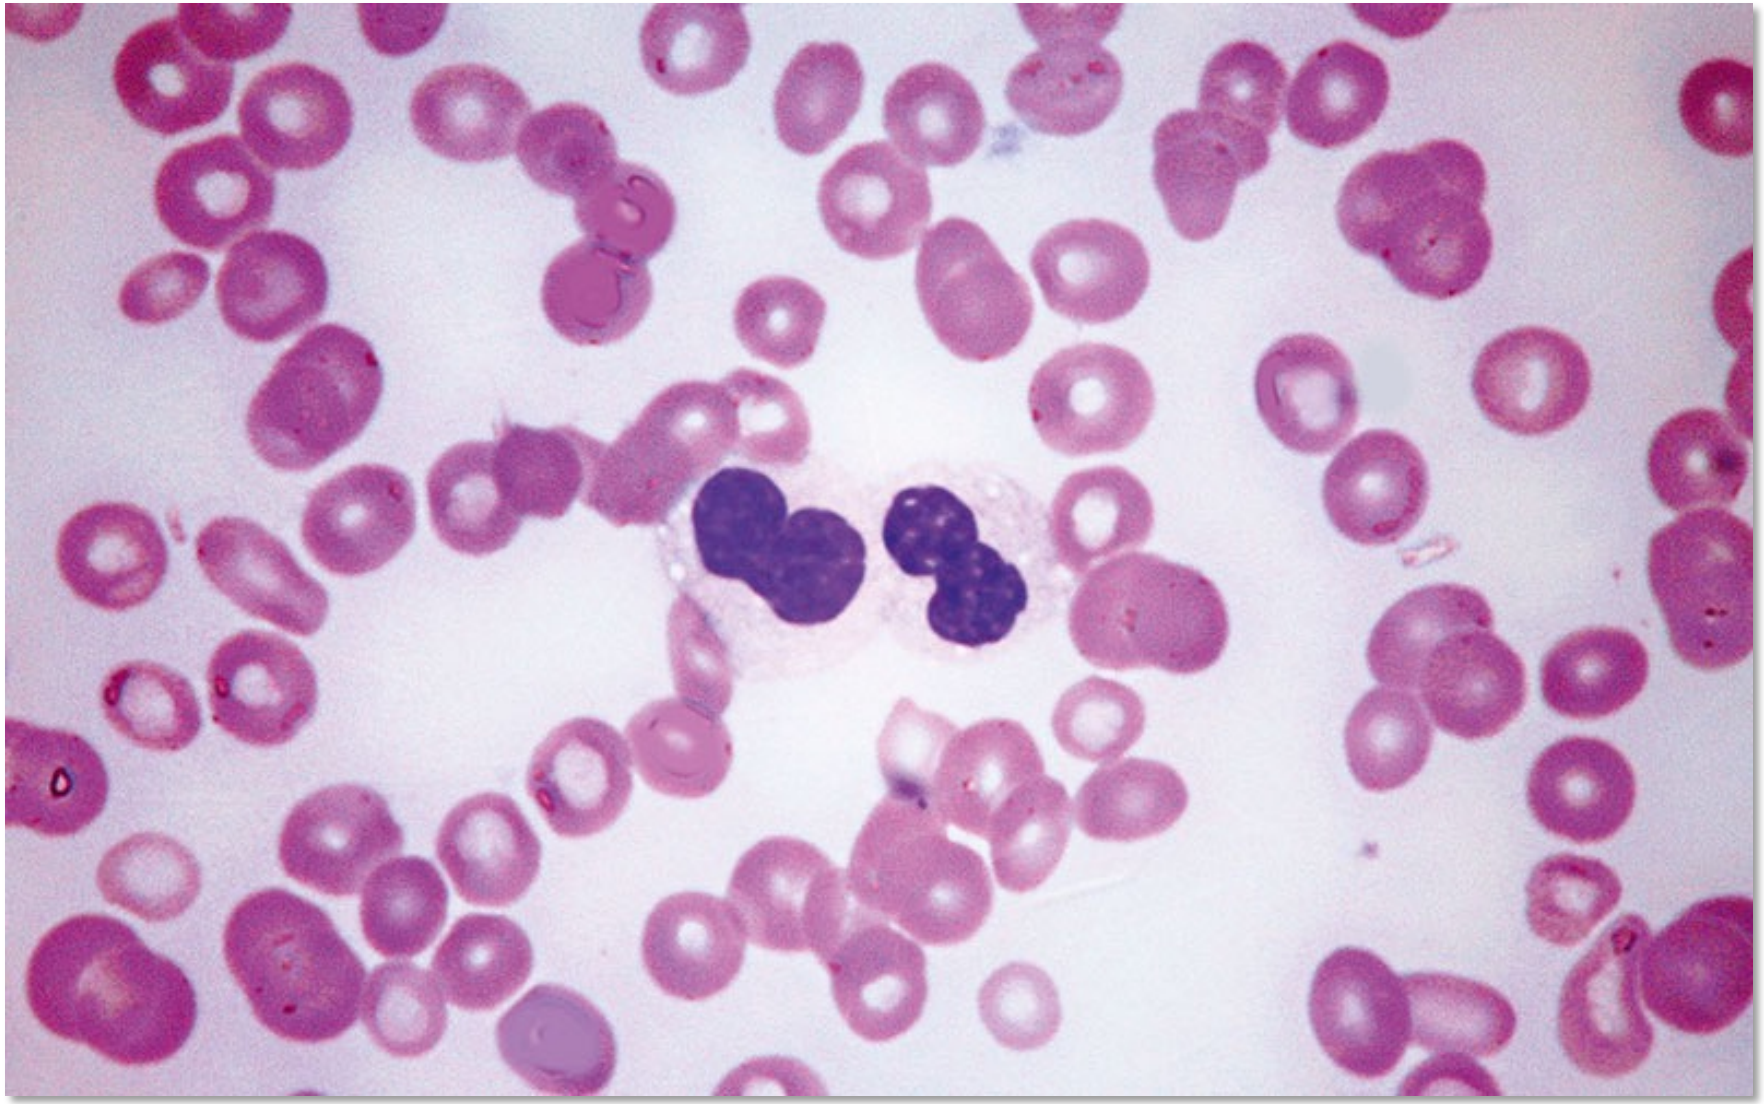
Che tipo di piastrinopenia?

1) Lieve 2) Moderata **3) Severa**

Che tipo di neutropenia?

1) Lieve **2) Moderata** 3) Severa

Chiedereste altri esami?

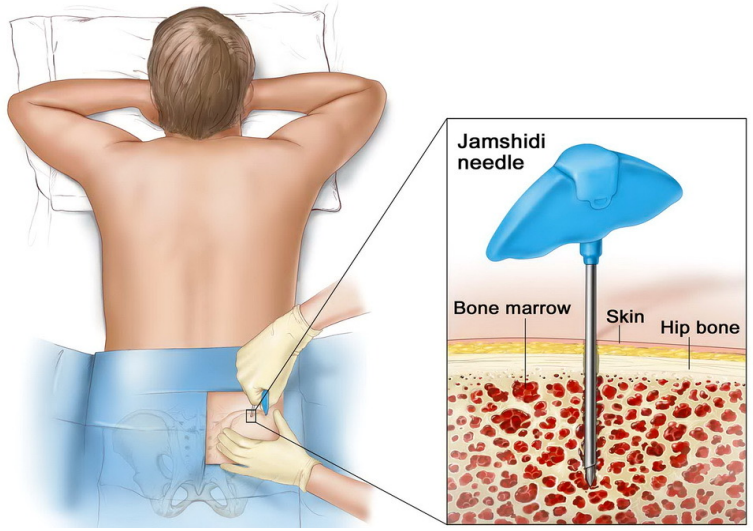


- Neutrofili iposegmentati
- Aniso-poichilocitosi
- Ovalociti
- Piastrinopenia
- NO BLASTI

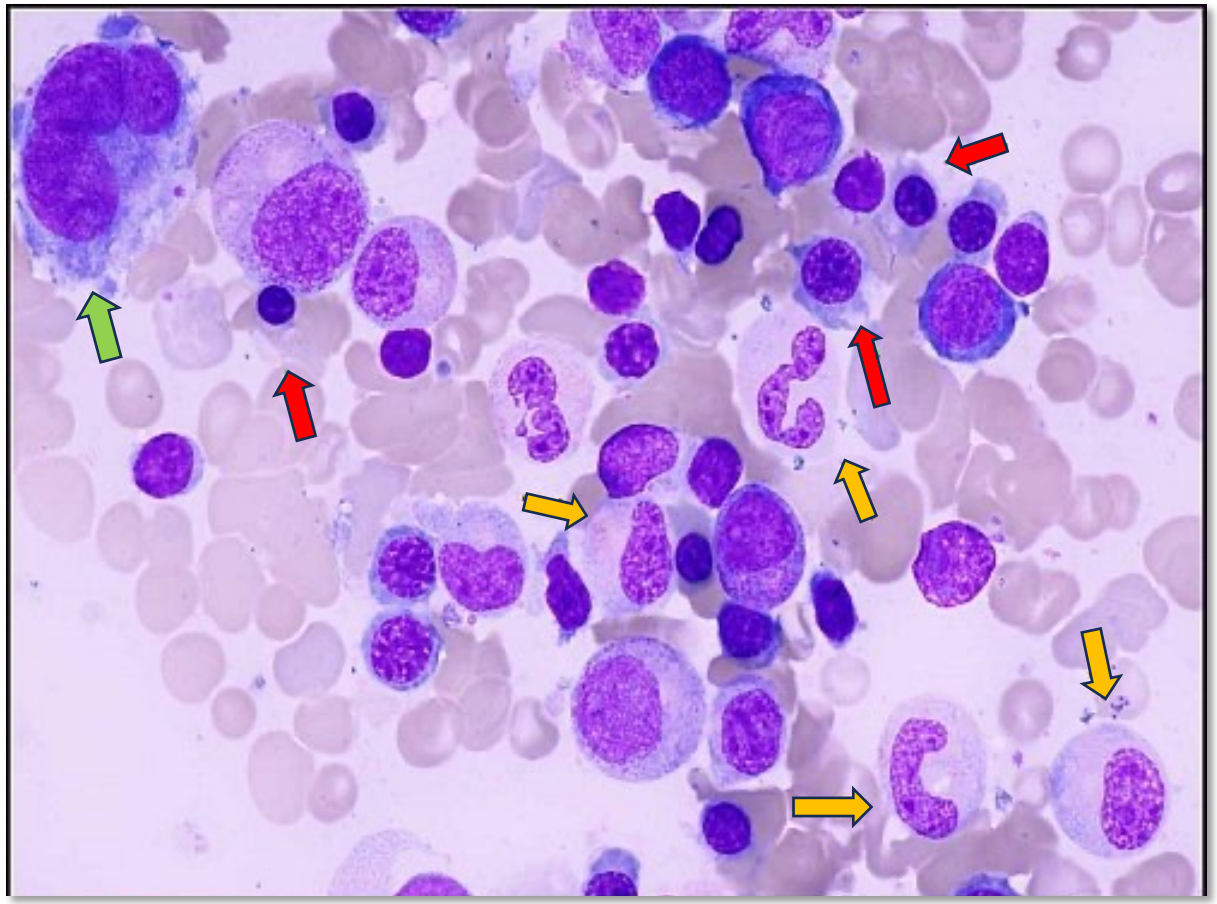
Che cosa sospettate?

Sindrome mielodisplastica

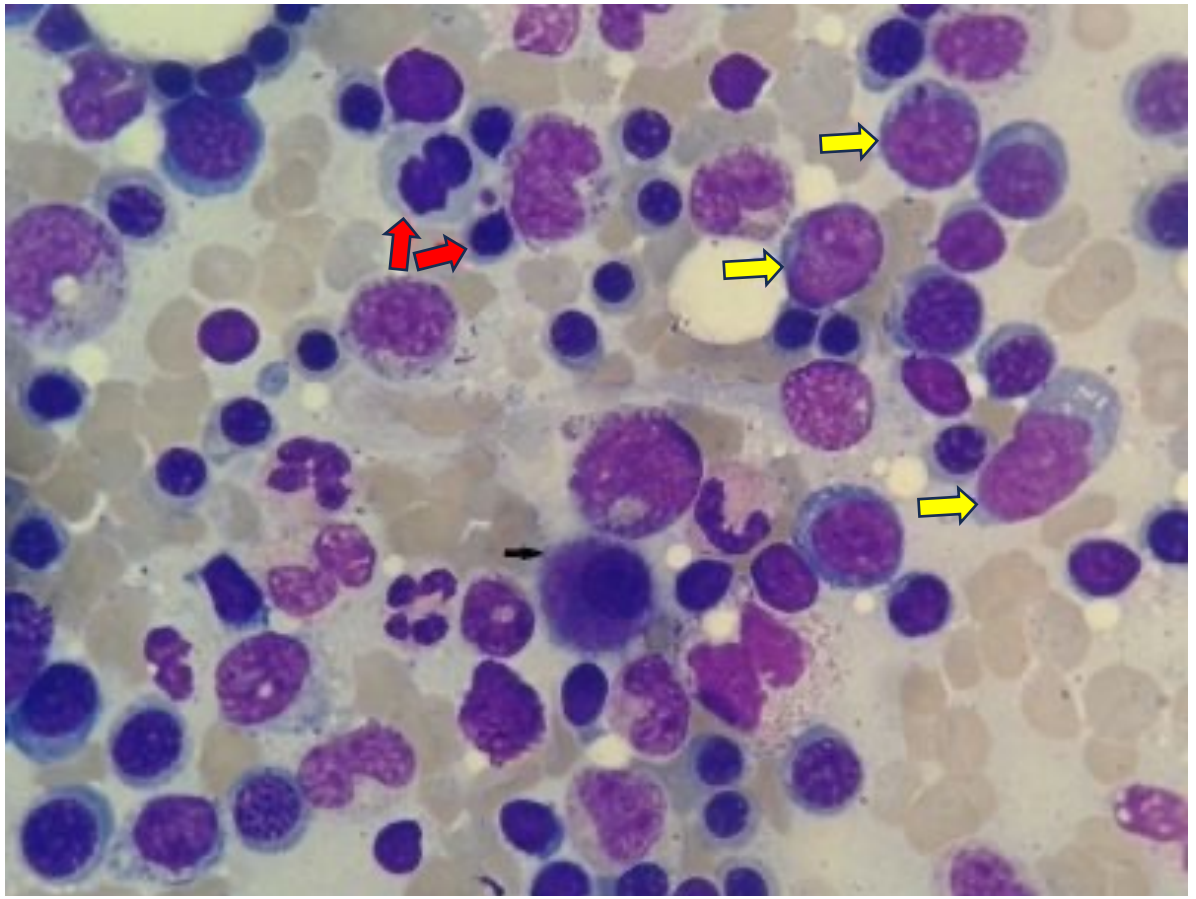
Chiedereste altri esami?



Valutazione midollare



- Mitosi anormali e ponti internucleari fra eritroblasti
- Blasti
- Granulociti con citoplasma ipogranulato
- Promegacariocito



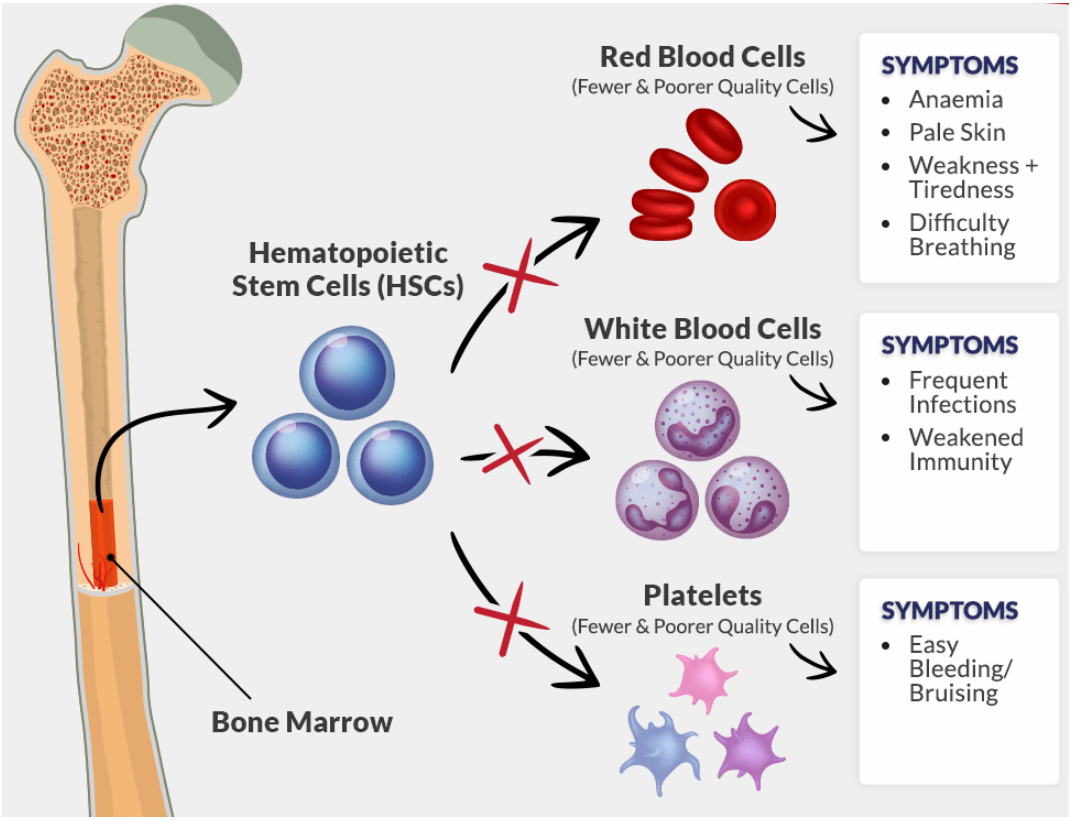
- Cellularità aumentata
- **8% BLASTI**

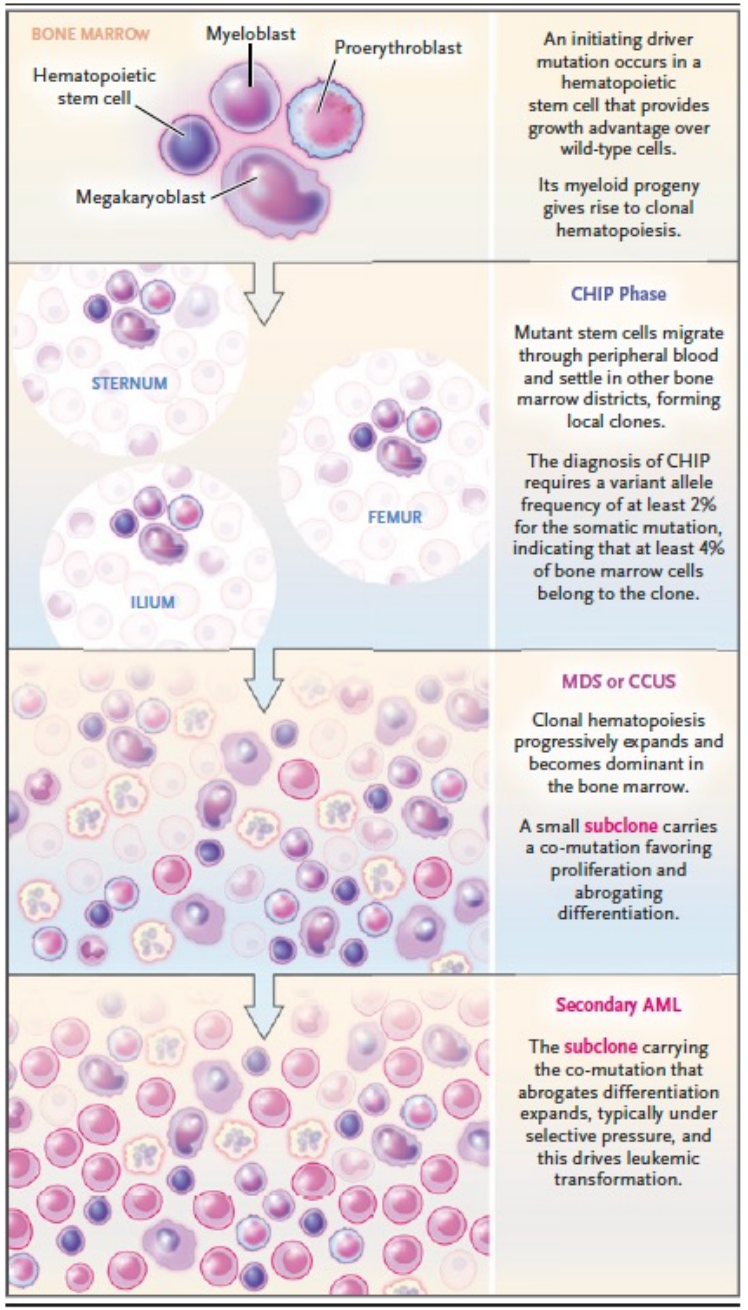
MDS

1) **citopenia** periferica

2) **dismielopoiesi**, con midollo più spesso normo-ipercellulato, più raramente ipocellulato, con o senza incremento della quota blastica (comunque < 20%)

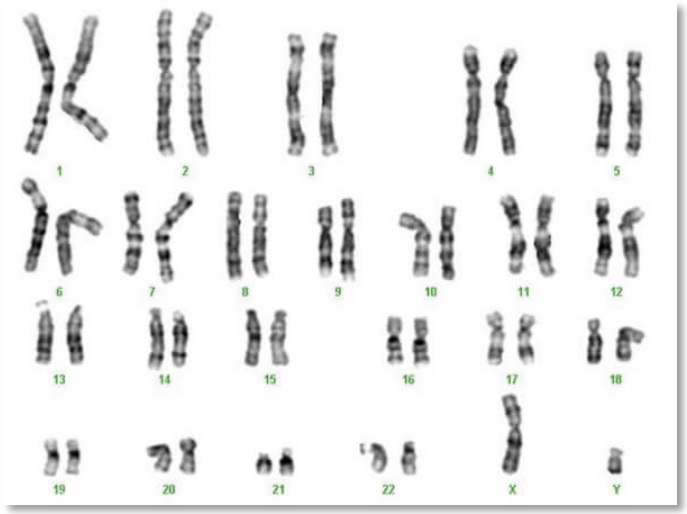
3) **aumentato rischio di evoluzione in leucemia acuta mieloide (AML)**



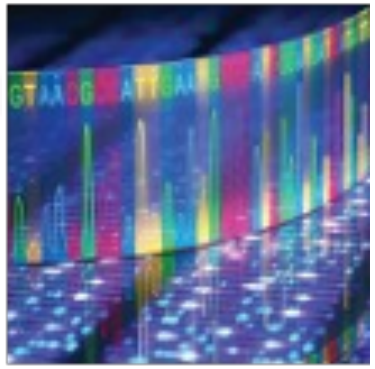


Cazzola, NEJM 2020

Valutazione midollare: quali altri test?



Cariotipo: 46 XY



NGS: ASXL1 & TET2 mutations

Analisi citofluorimetrica

TABLE 6 Integrated MDS-MFC score (iFS) (modified from Cremers et al., 2017)

Diagnostic score	<2 abnormalities								≥2 abnormalities							
Aberrant myeloid progenitors	−	−	−	−	+	+	+	+	−	−	−	−	+	+	+	+
Aberrant neutrophils (SSC or ≥2 other aberrancies) Aberrant monocytes (CD56/≥2 aberrancies)	−	−	+	+	−	−	+	+	−	−	+	+	−	−	+	+
Aberrant erythroid (≥2 aberrancies)	−	+	−	+	−	+	−	+	−	+	−	+	−	+	−	+
iFS[a]	A	B	B	C	B	C	C	C	A/B	C	C	C	C	C	C	C

Note: The four-parameter diagnostic score is as described by Della Porta et al., 2006. Abnormal features in progenitors, granulocytes, monocytes, and erythropoiesis as depicted in Tables 1–4.

[a]*i*FS Category A: no MDS-related features; B: limited number of changes associated with MDS, or C: features consistent with MDS. Choice for A or B and B or C depends on the kind and number of aberrancies that are encountered. Note that patients with ≥2 points in the four-parameter score can still be concluded as not consistent with MDS by the *i*FS when there are no other abnormalities.

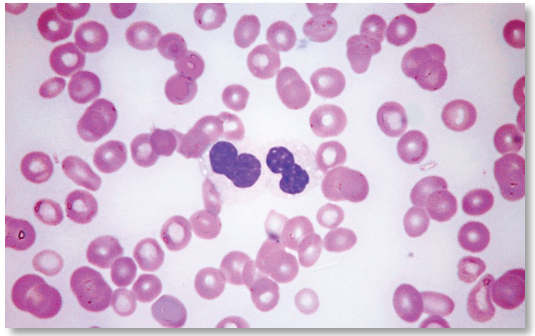
IF: CD34+CD33+CD45dimCD117+: 7%

- Maschio, 72 anni
- Astenia ed episodi infettivi ricorrenti all'esordio

Pancytopenia

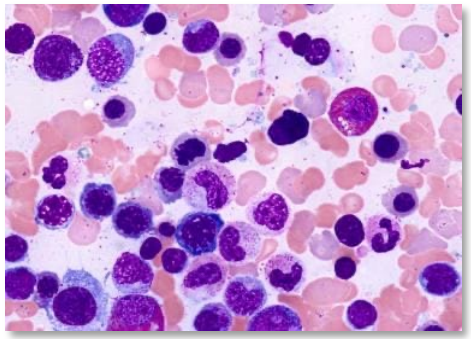
- Hb: 8.5 g/dL
- PLT: 26 x10^9/L
- GB: 2.7 x10^9/L

Peripheral blood



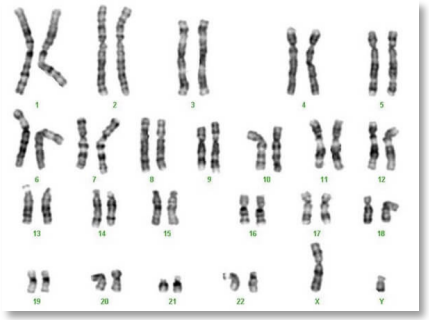
NO blasti circolanti
Neutrofili ipogranulati
IF: CD34+CD117+ 0.5%

Bone Marrow



MDS
8% blasti

Cytogenetics & Molecular Biology



Cariotipo normale

ASXL1 & TET2 mutations

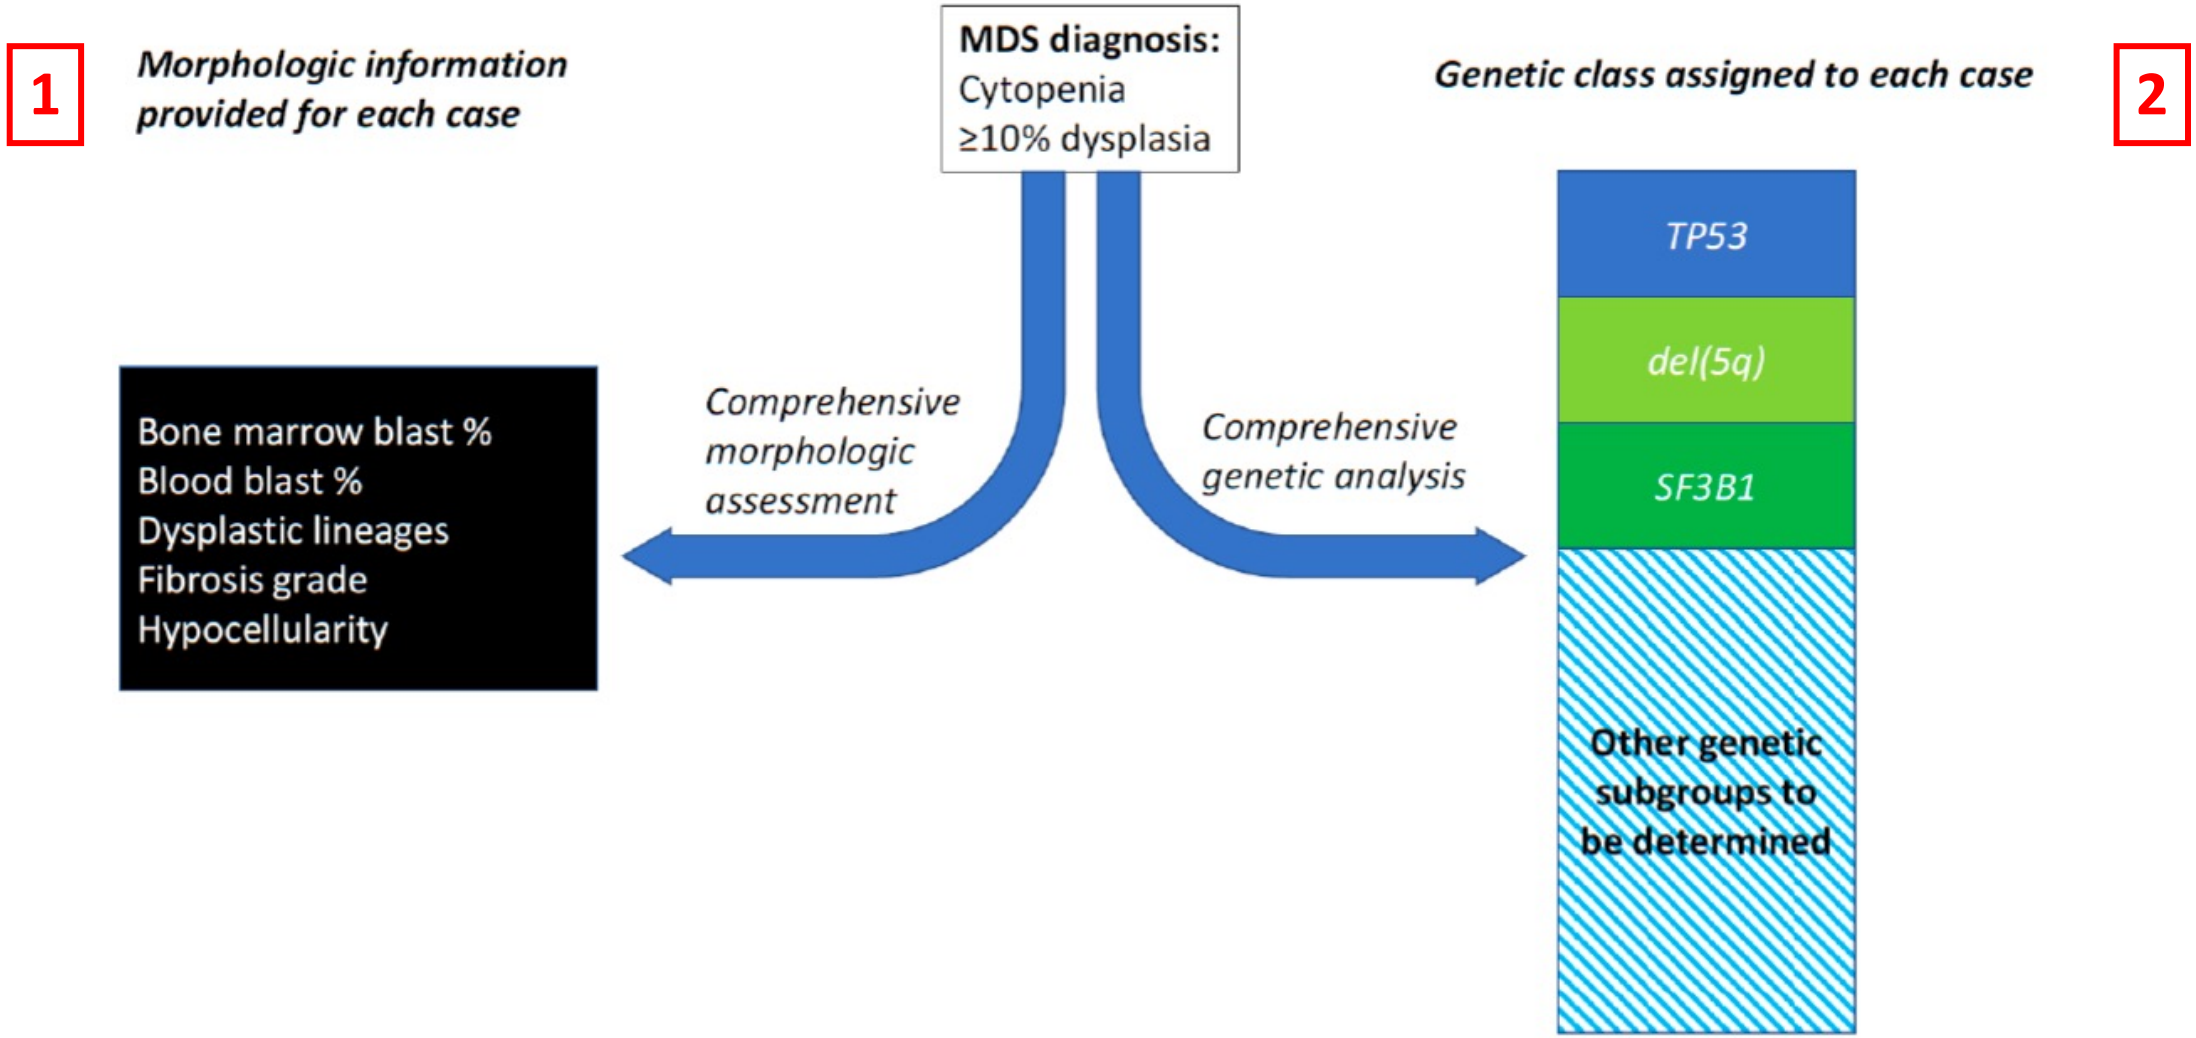
MDS with increased blasts (MDS-IB) type I (WHO 2022)
MDS with excess blasts (MDS-EB) (ICC 2022)

2022-WHO classification of Myelodysplastic Syndromes

	Blasts	Cytogenetics	Mutations
MDS with defining genetic abnormalities			
MDS with low blasts and isolated 5q deletion (MDS-5q)	<5% BM and <2% PB	5q deletion alone, or with 1 other abnormality other than monosomy 7 or 7q deletion	
MDS with low blasts and *SF3B1* mutation[a] (MDS-*SF3B1*)		Absence of 5q deletion, monosomy 7, or complex karyotype	*SF3B1*
MDS with biallelic *TP53* inactivation (MDS-bi*TP53*)	<20% BM and PB	Usually complex	Two or more *TP53* mutations, or 1 mutation with evidence of *TP53* copy number loss or cnLOH
MDS, morphologically defined			
MDS with low blasts (MDS-LB)	<5% BM and <2% PB		
MDS, hypoplastic[b] (MDS-h)			
MDS with increased blasts (MDS-IB)			
MDS-IB1	5–9% BM or 2–4% PB		
MDS-IB2	10-19% BM or 5–19% PB or Auer rods		
MDS with fibrosis (MDS-f)	5–19% BM; 2–19% PB		

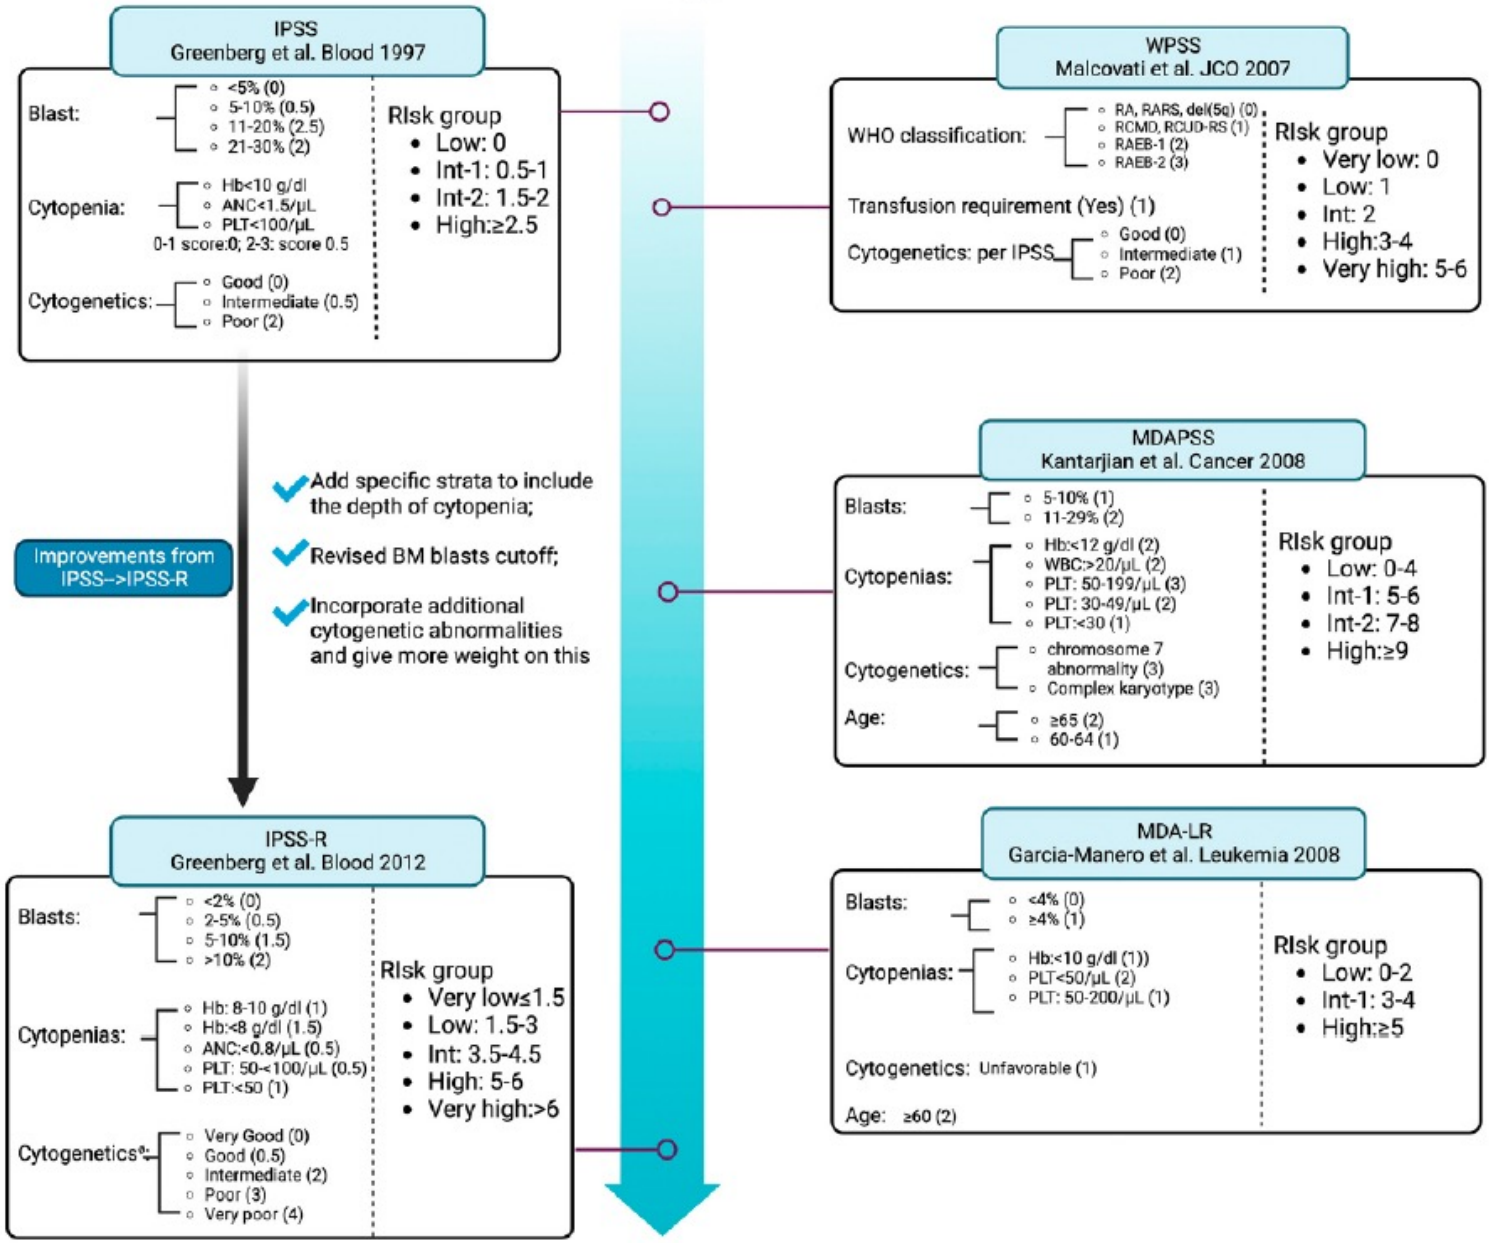
[a]Detection of ≥15% ring sideroblasts may substitute for *SF3B1* mutation. Acceptable related terminology: MDS with low blasts and ring sideroblasts.
[b]By definition, ≤25% bone marrow cellularity, age adjusted.
BM bone marrow, *PB* peripheral blood, *cnLOH* copy neutral loss of heterozygosity.

2022-WHO classification of Myelodysplastic Syndromes



Hasserjian R, Germing U, Malcovati L. Blood 2023

Prognosi



Risk Stratification through the IPSS-R

	Median Overall Survival *yr*	MDS Risk
Very low risk	8.8	Lower risk (IPSS-R score ≤3.5; median overall survival, 5.9 yr)
Low risk	5.3	
Intermediate	3.0	Higher risk (IPSS-R score >3.5; median overall survival, 1.5 yr)
High risk	1.6	
Very high risk	0.8	

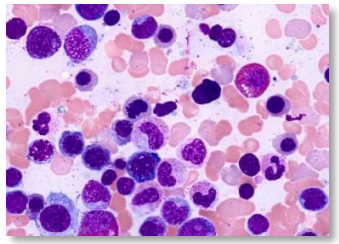
Stahl M et al. Blood Rev 2023

Prognosi: IPSS-R

	Prognostic score value						
	0	0.5	1	1.5	2	3	4
Prognostic category							
Cytogenetics	Very good		Good		Intermediate	Poor	Very poor
BM blasts, %	≤ 2		> 2 to < 5		5–10	> 10	
Hgb, g/dL	≥ 10		8 to < 10	< 8			
Platelets, x 10^9/L	≥ 100	50 to < 100	< 50				
ANC, x 10^9/L	≥ 0.8	< 0.8					

Cytogenetic group	**Characteristics**
Very good	−Y, del(11q)
Good	Normal, del(5q), del(12p), del(20q), del(5q) + 1 additional abnormality
Intermediate	del(7q), +8, +19, i(17q), other abnormalities not in other groups
Poor	−7, inv(3)/t(3q), −7/del(7q) + 1 additional abnormality, complex (3 abnormalities)
Very poor	Complex (> 3 abnormalities)

Cariotipo normale



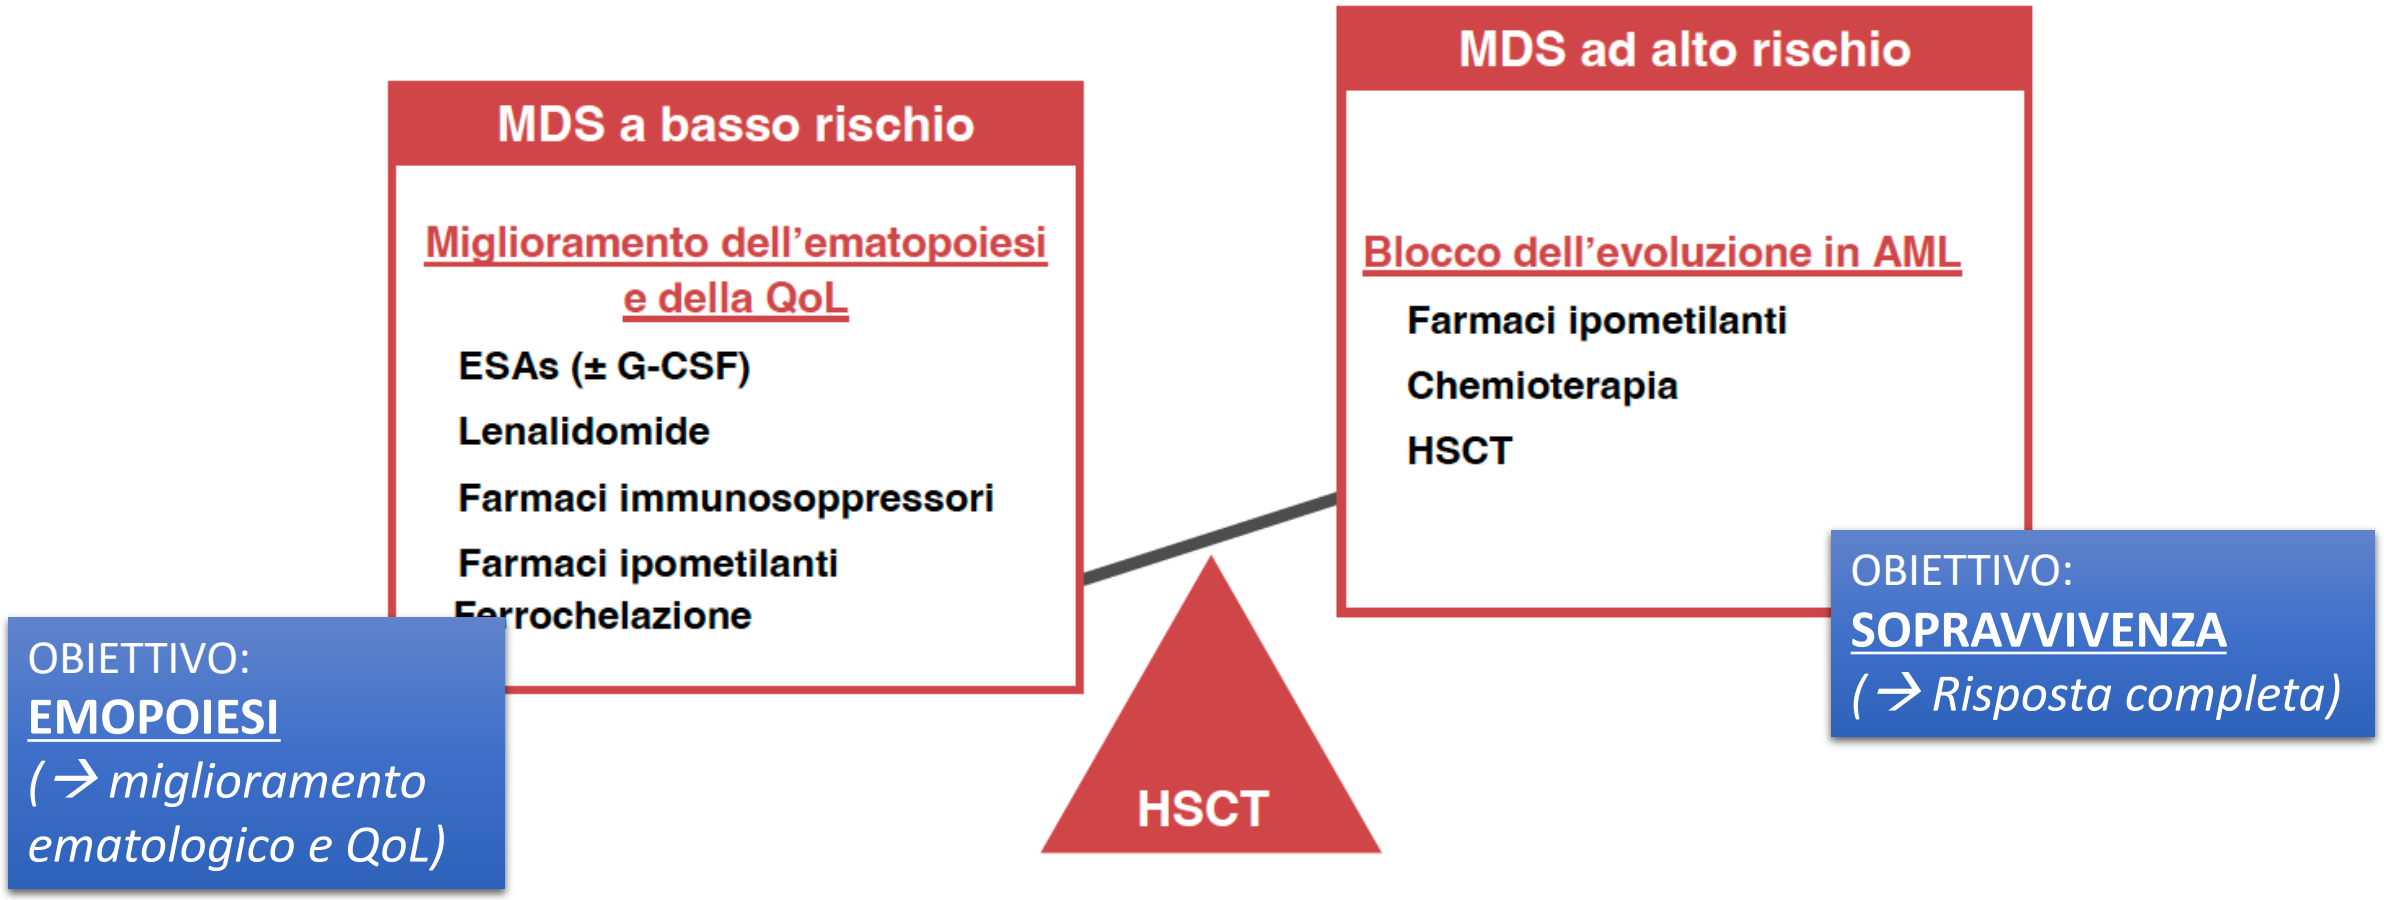
8% blasti

Pancytopenia

- Hb: 8.5 g/dL
- PLT: 26 x10^9/L
- GB: 2.7 x10^9/L

IPSS-R: 5 (=ALTO)

Terapia



MDS a basso rischio
Miglioramento dell'ematopoiesi e della QoL
ESAs (± G-CSF)
Lenalidomide
Farmaci immunosoppressori
Farmaci ipometilanti
Ferrochelazione
MDS ad alto rischio
Blocco dell'evoluzione in AML
Farmaci ipometilanti
Chemioterapia
HSCT
HSCT
OBIETTIVO:
EMOPOIESI
(→ miglioramento ematologico e QoL)
OBIETTIVO:
SOPRAVVIVENZA
(→ Risposta completa)

Terapia target

	Mutations	Frequency	Typical features	Treatment options
Favorable	*SF3B1*	30%	Ring sideroblasts	Luspatercept
Unfavorable	*TP53*	7-10%	Chromosomal aberrancies	APR-246, magrolimab
	ASXL1	20-23%	Epigenetic changes	Hypomethylating agents
	EZH2	7-10%		HSCT
Null	*IDH1*	2-3%	Differentiation block	Ivosidenib
	IDH2	4-5%		Enasidenib
Familiar predisposition	DDX41	1-3%	Monocytopenia, Lymphedema, Platelet disorders	Genetic counseling, HSCT, Preferential use of unrelated donors
	GATA2	<1%		
	ETV6	<1%		

Voso, Hematology 2021

Back to the patient

- **70 anni**
- **2 figli in buona salute, non Fratelli**

- **MDS with increased blasts (MDS-IB) type I (WHO 2022)**
  MDS with excess blasts (MDS-EB) (ICC 2022)
- **IPSS-R: ALTO**
- **PS: 90%**
- **Comorbidità:**
  - Precedente ischemia miocardica acuta
  - Diabete mellito in trattamento con ipoglicemizzanti orali (*Metformina*)
  - Tumore alla prostata 3 anni fa (chirurgia + chemio)

Quale trattamento?

Terapia
